# Nevada Housing Stability Index

## OVERVIEW

The Nevada Housing Stability Index (NHSI) is intended to monitor the overall health of Nevada's housing market as opposed to simply the movement in home prices. While directional movements in median home prices are a critical component to evaluating the housing sector, they only depict part of the picture. Pricing may move up or down for any number of reasons. In situations where availability is artificially limited, prices may rise. Similarly, when prices extend well beyond consumers' ability to pay commensurate mortgage payments, the market may be viewed as unstable.

In an effort to assess the market's overall stability, a series of ratios and performance metrics have been developed. Each of these 12 independent series has been consolidated to create the NHSI. These measures have been weighted based on their relevance and importance to the housing market's performance. The weighted average of the above indices is then calculated to formulate a grade point average (GPA) for the housing market. Given concerns about stability in the housing market throughout recent history, it has been impracticable to achieve a 4.0 GPA, or a perfect score. An aggregate grade of a "C" represents an average quality housing market. It is important to understand the directional movements in the composite score, including the driving forces behind the changes quarter-to-quarter. This analysis is intended to provide additional insight into Nevada's housing market stability.

## ABOUT BUSINESS & INDUSTRY

The Nevada State Department of Business and Industry is a cabinet level agency in Nevada State government. Our objective is to encourage and promote the development and growth of business in order to protect consumers by maintaining a fair and competitive regulatory environment. The Director's office at B&I manages a number of programs and initiatives to address the needs of small businesses, homeowners and consumers including small business advocacy, bond programs, access to capital, housing retention programs, constituent services and fraud prevention and education.

## Current Assessment

Improvements in the overall Nevada housing market stalled during the first quarter of 2014. By the close of the quarter, the Nevada Housing Stability Index (NHSI) reported a composite value of 2.14, remaining at a C grade when compared to the fourth quarter of 2013. Compared to the same quarter of the prior year, the NHSI is up significantly from a value of 1.48 (D+ grade). The median sales price in the Silver State remained at \$175,000 quarter-to-quarter. The flattening trend in total median prices was the result of a modest price increase in the resale segment, which was offset by a slight decline in the new home segment. In northern Nevada, the median price increased from \$208,000 to \$220,000, while southern Nevada pricing increased from \$173,995 to \$175,000 in the past three months. Consistent with statewide pricing trends, overall market stability remains relatively flat, with 7 of 12 indicators reporting no grade change in the most recent quarter. Results were mixed for the other 5 indicators, resulting in a flat performance in the overall index value.

## Positive Signs

Although a number of index measures maintained the same grade as the prior quarter, measures relating to the share of distressed property sales and relative new home prices improved this quarter sufficiently to earn a higher mark. Foreclosure volume continued to decrease, with only 2.7 percent of mortgages in the foreclosure process. The share of distressed home sales also plummeted by 5.2 percentage points to 22.2 percent in the first quarter. The new-to-resale price ratio fell 8.7 percentage points to a 55.8-percent premium for new homes. Although the grade remained unchanged with an A, the employment change-to-permits ratio increased since last quarter to 3.61, suggesting the economic climate is pressing ahead of equilibrium construction levels. Finally, though delinquency rates across Nevada continued to drop by 0.7 percentage points to 7.0 percent, southern Nevada continues to struggle more in this area, with a 7.8-percent delinquency rate compared to 4.9 percent in northern Nevada.

## Negative Signs

The two indicators that turned negative in this quarter's index suggest a reluctance or difficulty for potential homeowners entering the market. The community borrowing ratio fell this past quarter to 41.1 percent; currently, the Nevada housing market is significantly underleveraged compared to historical norms. The share of investor purchases also rose by 3.1 percentage points to 43.9 percent in the first quarter. In Clark County, the share of investors actually fell to 46.6 percent of all home sales, but in the Reno-Sparks area, investor purchases rose 7.0 percentage points to 29.7 percent of all home sales.

## Nevada Housing Stability Index

<sup>1</sup> The Underwater Loan Percentage data sourced to CoreLogic lags other indicators in terms of timing.

Note: Median home prices are sourced to CoreLogic.

## Underwater Loan Percentage

Share of Loans with Negative Equity

The ratio of homes with negative equity compared to the total number of loans in Nevada. The higher this ratio, the worse off the housing market is with more homeowners underwater on their loans.

## Community Borrowing Ratio

Loans-to-Employment Ratio

Measures the ratio of the total number of first home loans outstanding relative to the non-farm employment in Nevada. Ratios closest to the historical average are graded higher suggesting more balanced levels of borrowing, while a ratio too high or too low relative to the historical average suggests an unstable housing market.

## Foreclosure Volume

Share of Mortgages in Foreclosure

The ratio of the total number of foreclosures compared to the total number of loans in Nevada. This is graded on an exponential scale, meaning the jump from a B+ to A- is smaller than the jump from A- to A. The grading scale allows a drop in the foreclosures to be recognized with a better grade while still recognizing the market is not as healthy as it once was.

## Distressed Home Sales

Distressed Sales as a Percentage of Total Sales

The percentage of all sales considered distressed (i.e., auction sales, short sales and bank sales). A higher percentage of homes sold in distress suggests increased instability as fewer homes are being sold without the involvement of lenders' approval. A lower rate of distressed home sales suggests conditions are trending toward increased stability.

## Investor Purchase Share

Cash Purchases as a Percentage of Total

The percentage of homes that are acquired with cash (not financed). Although investor activity in the market has some positive impacts, a higher ratio suggests fewer end-user purchases are taking place, which can create instability in the longer-run.

## Delinquency Rate

Share of 90+ Day Delinquencies to Total Loans

The percentage of homes which are more than 90 days delinquent in mortgage payments. The ratio is an important indicator both of the homeowner's equity in the house and of their income, as an underwater or unemployed homeowner is less likely to make payments. This is graded on an exponential scale, meaning the jump from a B+ to A- is larger than the jump from A- to A.

## Housing Turnover Rate

Resale Closings as a Percentage of Total Homes

The ratio of total resale closings to the total number of homes in Nevada. The ratio gauges housing turnover in the market and the willingness of buyers and sellers in the current environment. Measured in an exponential scale; the change in ratio from an F to a D- is greater than that from an A- to an A.

## New-to-Resale Price Ratio

New Home Prices as a Percentage of Resale Prices

The ratio between new and resale median prices in Nevada. Historically, new home prices are 1.25 times the resale value. When the ratio is higher or lower than the long-run average, a supply and demand imbalance in the housing market may be present.

## Resale Housing Availability

Effective Months of Availability

Measures the general availability in the housing market. Specifically, how many months of housing inventory are currently listed as available or contracted on the Multiple Listing System (MLS) at the current rate that existing homes are closing within the market. A number that is too high or too low represents a potential imbalance between supply and demand for housing.

## Rent vs. Cost to Own

Average Apartment Rents as a Percentage of Mortgage Costs

Measures the average apartment rent for the quarter and compares this to the quarterly average monthly payment of a 30-year mortgage at current rates for 80 percent of the median house price. A ratio too high or low indicates a potential imbalance between for-rent and owner-occupied housing alternatives.

## Housing Affordability Ratio

Mortgage Costs as a Percentage of Average Wages

Measures the relationship between a consumer's ability to buy a home and the cost of a typical home. More specifically the ratio compares average incomes to the average mortgage cost (median home price assuming typical financing methods). High index levels suggest the cost of housing is outstripping incomes. Very low index levels suggest the market has entered a period of overcorrection and may also be out of balance.

## New Construction Supply-Demand Balance

Annual Employment Change-to-Home Permitting Volumes

Measures growth in potential demand for housing (employment) compared to the change in new supply for housing (permitting) using 12-month totals. Any negative figure (when employment change is negative) should be viewed as largely a negative performance metric and is assigned a grade of at most a D. For values above zero, the grades are scaled normally to an A for the highest level.

## SOURCES

The data utilized to develop the various performance metrics have been obtained from a number of sources. Due to the proprietary nature of the data and restrictions on their release, the underlying data is not available for broad distribution. The following summarizes the sources of information:

- » **Applied Analysis:** Average apartment rents
- » **Bureau of Labor Statistics:** Average weekly earnings and Nevada employment
- » **CoreLogic:** Total loan volumes, delinquent loans, negative equity, foreclosures, REO properties, distressed sales, housing price, and housing volume by category (volume data has been seasonally adjusted)
- » **Greater Las Vegas Association of Realtors (GLVAR):** Cash home purchases and Clark County availability
- » **Reno/Sparks Association of Realtors:** Cash home purchases
- » **St. Louis Federal Reserve:** 30-year conventional mortgage rate and new private housing units authorized in Nevada
- » **University of Nevada, Reno Center for Regional Studies:** Washoe County availability

## APPLIED ANALYSIS

Applied Analysis (AA) was retained by the State of Nevada Department of Business and Industry to evaluate Nevada's housing market stability. Relevant data were obtained from a number of sources, including national, regional and local data providers. In some instances, the underlying data are proprietary and subject to distribution restrictions. AA assumes the provided report format is sufficient to meet these distribution restrictions while providing sufficient detail to evaluate market conditions. While we have no reason to doubt the accuracy of any of the data reported, we have not performed an audit or assurance procedures on these data, and as such, we cannot attest to their completeness.
